CARLCHEM

ABOUT THE FOUNDER

Carl Emerson Consulta
Licensed Embalmer | Educator | Global Speaker & Industry Mentor

With nearly twenty years of technical expertise, Carl Emerson Consulta is a distinguished embalmer, educator, and funeral service specialist dedicated to the art of restorative care and human preservation.
He holds the distinction of being the first Asian professional to earn the NFDA International Professional Achievement Certificate (NFDA-IPAC). This milestone highlights his devotion to elevating mortuary standards and professional excellence across the continent.

Carl's influence extends into academia, where he has served as a faculty member teaching Biology, Anatomy, Physiology, and Biochemistry. His unique ability to merge rigorous scientific theory with practical mortuary application provides a comprehensive perspective on the science of preservation.

An esteemed voice in the industry, Carl is a frequent keynote speaker at international funeral expos and professional seminars. He shares vital insights on tropical preservation challenges, chemical safety, and advanced restorative techniques to help modernize the field.

As a dedicated mentor, he advocates for an industry shaped by continuous learning and ethical practice, ensuring the next generation of embalmers is equipped with scientific precision and compassion.

Evolution of a Vision: The Birth of CarlChem

CarlChem was born from a commitment to better solutions.

Having spent decades facing the specific difficulties of embalming in tropical climates, Carl identified a gap in the market for products that truly meet the needs of active practitioners. This firsthand insight led to the creation of CarlChem—a brand rooted in peak preservation performance and scientific integrity.

We provide more than just chemical supplies; we offer a partnership in professional growth. By blending innovation with real-world experience, CarlChem is transforming mortuary practices in the Philippines and throughout Asia.

"CarlChem was created by an embalmer, for embalmers—grounded in science, proven by experience, and defined by dignity."
